

rHome and rButler

Smart Home Energy Management

Green Living Technology has developed rHome, an Internet approach to manage residential home energy more efficiently. rHome products combined with the users rButler service will change the way an average home manages energy use. The rHome was designed for user installation, setup and operation. The ultimate “smart home” energy manager.

The low cost rHome combined with rButler reduces energy consumption through daily monitoring of climate, home conditions and user established patterns. While following habits, rButler can recommend a plan for conservation and comfort, thus saving the user money. rHome with rButler is the ultimate “smart home” solution to control rising home energy costs. Go green, save gold.

Green Living Technology
