ThermaZone

The ThermaZone is a replacement thermostat that is intelligent as well as programmable. GLT rHome with rButler tracks and adjusts usage within the home. It refines temperature regulation with improved thermostat efficiency. By tracking patterns, the GLT rButler creates a profile. This profile is used to maintain personal comfort while using minimal resources. The ThermaZone can also be accessed locally or remotely with several personal communicators.

Features

- Refines home temperature regulation, saving money
- Improves thermostat operation, saving energy
- Easy real time temporary condition adjustments
- Adapts to the simple residential home lifestyle
- Online support that further control energy usage
- Digital LCD temperature display
- Four user interface buttons for temperature, mode and fan
- Reliable wireless communication to IntelHome
- Updates time, weather and seasonal information
- Improved thermostat user interface
- Simple installation and connection
- Remote location and optional hand held access

A programmable thermostat is the number one way to conserve energy, now an intelligent solution.
