Conserving Water

AquaZone

The AquaZone is a device that replaces your current irrigation timer. The AquaZone communicates with the GLT rHome for the current date, time and weather. An AquaZone brings intelligence to irrigation and garden watering. The GLT rButler will never allow watering in the rain or under watering on hot days. Your rButler always insures that the landscaping will receive exactly what it needs. Not only will this reduce the home consumption of water but will insure that this valuable resource is not wasted. Use only what you need and don't pay for a drop more.

Features

- Climate adjustments regulated by season
- Irrigation modified daily based on weather conditions
- No more watering in the rain. Additional water when hot.
- Minimizes over saturation and water runoff
- No adjustment throughout the year for seasons
- Simple ways to add zones to the system
- Compensates for temporary temperature increases
- Manual control and cycle buttons for easy use
- Simple setup programming with watering recommendations
- Remote access allows easy access
- Adapts to the simple residential home lifestyle
- Exciting new features that control energy usage

Most sprinkler systems on the market today dispense the wrong amount of water in rain or shine, summer or winter. This will waste water, natural resources and kill your valuable plants. You can save 1/3 of you water bill when irrigating your yard correctly.
